

INTRODUCTION

Overview

Online restaurant management system is a web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a kind of business that serves people all over the world with ready made food. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders.

Purpose

Online restaurant management system is the system for managing the restaurant business. After successful login the customer can access the menu page with the items listed according to the desired time. The main point of developing this system is to help restaurant administrator manage the restaurant business and help customer for online ordering and reserve table.

LITERATURE SURVEY

Existing problem

Nowadays, many restaurants manage their business manual especially take customer ordering. In the traditional booking system, a customer has to go to restaurant or make a phone call in order to get his meal reserved. Today restaurant waiter takes the customer ordering by manual system with using paper.

Proposed solution

Many people have experienced going to a restaurant where the service is poor and there is a lack of attention from the wait staff. The paper menus can be flimsy, hard to navigate, and outdated. To leverage the growing mobile industry, the online restaurant proffers solution. This restaurant menu and management system will replace the paper waste, is more maintainable, and allows for greater customer engagement. The problem confronting the research is to determine the Documentation for online restaurant management system.

THEROTICAL ANALYSIS

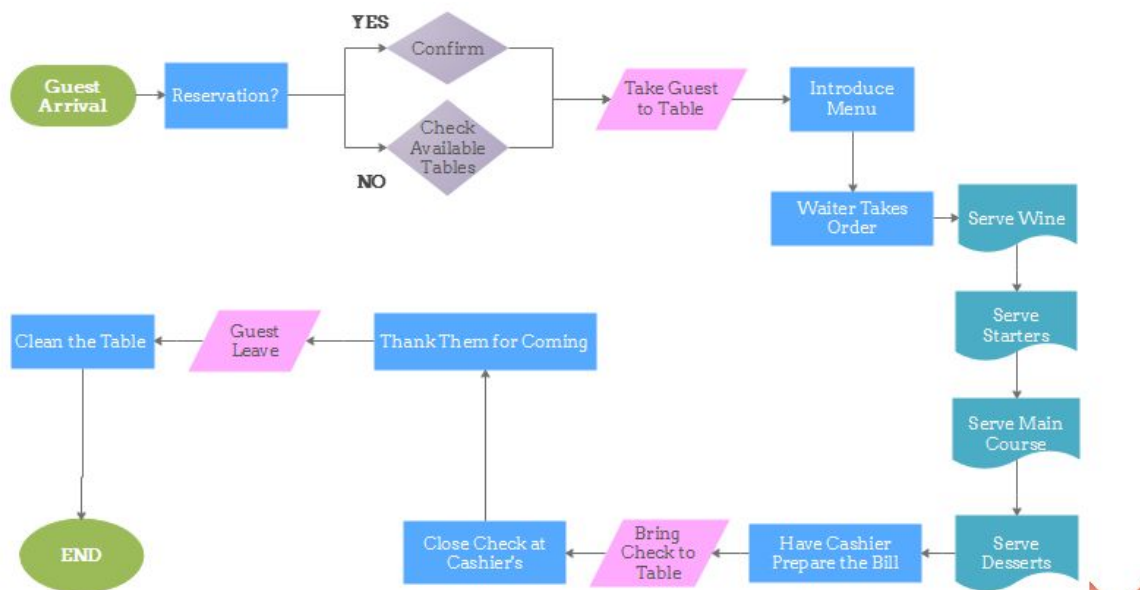

Block diagram

hardware/software designing

Restaurant management software is designed specifically to help users manage their food service establishment. Some platforms have functionality related to customer interactions, such as that found in a point of sale (POS) system, but more often restaurant management software focuses on behind-the-scenes processes such as restaurant employee scheduling, inventory management and accounting.

FLOWCHART

RESULT

"Online Restaurant Management System" is a web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a kind of business that serves people all over world with ready-made food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders.
